Summary

Hands-on, successful Software Engineer with 4 years of verifiable success leading Junior developers in delivering appropriate technology solutions for web products. Comprehensive knowledge of platform development, custom library architecture, agile methodologies, cloud services and web-based applications. Innovative, forward-thinking Information Technology consulting, and customer support.

Experience

Senior Software Engineer

Trika Technologies • Bengaluru, Karnataka
08/2023- Present

MuralsYourWay

Technologies used React Hooks, NodeJS Rest API
Website built on Cloud based vtex platform which includes sales of Wallpapers

Senior Software Engineer

Softobotics • Bengaluru, Karnataka
06/2020 – 07/2023

P & D truck rental

Technologies used Angular, NodeJS Rest API
Worked on both frontend, backend and project architecture.
Created components from scratch keeping reusability and scalability in mind.
Collaborated with peers to help and improve other modules, deployments and setting up GitHub actions. This is the Truck management website which used to maintain the Rentals for FedEx in USA. Where user can rent truck on daily, weekly and monthly basis.

Maritime Financial

Technologies used Angular, NodeJS and third-party API's like IEX cloud and ALPACA.
This application is basically for stock market traders for the country Trinidad and Tobago.
Managed and guided interns during the development and testing of products.

My wealthiness

This is the sub-project of **Maritime Financial.**
In this we are allowing the traders to take the risk assessment to know the Investment Strategy. For taking the survey we have implemented surveyJS library.

SDX Space

Technologies used Angular, NodeJS and MySQL.
Basically, this is the assessment for individual and company which gives the clarity about their knowledge and core expertise for digital transformation.
This is integrated with O'Reilly for purchasing books and videos which help to get the commission.

TMS (Team Management System)

This is the company team management application where we've integrated with Azure active directory. In this team leaders can see their direct reportees where they can track their leaves and worksheet. Also, we've integrated with time office (To track the punch in/out).
By using this application, we can generate the pay slips too.

MOJIN

Technologies used Angular, NodeJS (AWS serverless) and MySQL.
This application is basically to merge the three portals in one single web app.
This application helps to add the multiple resellers and allow them to add their business admins. In this we provide the Flowchart generator tool which takes CSV input and generate the PPTX file with the flowchart. Also, we provide file sync tool (like OneDrive). For this technology used elastic search and elastic file storage.

Software trainee

Mountblue • Bengaluru, Karnataka
11/2019 - 03/2020

Develop application-specific software.
Communicate with staff or clients to understand specific system requirements.
Collaborate with engineers or software developers to select appropriate design solutions or ensure the compatibility of system components.
Research, test, or verify the proper functioning of software patches and fixes.

Skills

Building project from scratch, Angular, NodeJS, JavaScript, HTML5, CSS3, ExpressJs, Bootstrap. AWS

Tools: S3, Cloudfront, lightsail, lambda functions, EC2, Cloudwatch

Education

BE. Electronics and Communication

Angadi Institute of Technology and Management • Belagavi, Karnataka
2012-2016
